The fully comprehensive catalogue for the commercial grower

# Welcome to our 2024 catalogue

Tracy Palmer Managing Director

Andrew Tokely Horticultural Director

Julia Simpson

This year once again we have introduced many NEW varieties to our already extensive range of both flowers and vegetables.

Andrew has been able to go to many trials this year both UK and EU looking for anything new and exciting which he feels will suit our customers. There are some very interesting varieties especially in our pepper and tomato sections, even though it is proving more difficult to get these varieties in from overseas, we have managed to secure stock on many varieties.

As mentioned in last year's catalogue, please always reserve your seed well in advance, once the stock is sold it now takes many weeks for us to re-order and go through all the custom checks, it's really not as easy as it used to be.

The good news is, we are now able to trade with Northern Ireland. Although it is now possible to send seed, there is more paperwork to be completed. Please allow a few extra days when ordering to Northern Ireland. Unfortunately, this does not include onion sets, garlic, potatoes or plants, these items are still excluded.

By the time you receive this catalogue our commercial website will have been updated. If you haven't ordered from us recently you will need to reset your password, you will only need to do this once. Passwords are unable to be saved when a system is being updated due to GDPR. Please check out the website **www.kingsseedsdirect.com** you can order anytime 365 days of the year.

Seed quality as far as we are all concerned is the most important factor. We have a well-equipped laboratory under the management of our qualified seed analyst Julia Simpson who tests all seed for germination, vigor and purity to meet the legal standards. As we are still a totally independently privately owned company, and not influenced by outside forces, we are in a unique position to be able to select and offer the very best, possible range available worldwide to our many customers. In addition, when it comes to Kings Seeds you always get what it says on the tin, by that, I mean that if you ask for a specific variety, it will always be genuine stock, and not a look alike, cheaper alternative. All our seeds are carefully selected and cared for by our Horticultural Director Andrew Tokely who has been in the Horticultural industry for over 40 years.

To succeed in this extremely competitive world, your main ingredient to make your business grow, starts with a good, reliable seed supplier. We feel sure that once you have used our quality seeds you will never look back, as our catalogue is the one stop shop, as far as you are concerned, backed up by our quality service and advice.

To all our regular customers, we would just like to thank you for your continued support and would like to remind ALL existing and NEW customers that if you are unable to find varieties not listed in our catalogue or website, we will, depending on the quantity, obtain these for you at no extra cost. **All part of our excellent service**.

Finally, we look forward to receiving your orders in due course, and please feel free to contact our experienced staff, to discuss any requirements or queries you may have. May I take this opportunity to wish you a very happy, healthy and profitable season.

Tracy Palmer

the sowing date and location. The stems are easy to pick with excellent colour and medium to large heads with 8-15cm stem diameter. It is generally best programmed for one main pick with a follow-up secondary pick after 10 days giving average yields of 300-350g per plant. Therefore we would suggest at least two sowings to extend the cropping period of this excellent variety.

# Garlic Bulb

Garlic grows well over most of the UK provided it is grown in a free draining soil, that is not too acid (pH levels should be over 6.7) and kept well watered and weed free. On arrival garlic should be laid out to prevent sweating and sprouting. Any apparent deterioration in quality should be notified to us within 7 days of receipt of goods. PLEASE NOTE BULBS ARE AS DUG. Delivery from mid October onwards. Sorry, no garlic available after 28 February 2024.

#### SOFTNECK VERSUS HARDNECK

There are two distinctive types of cultivated garlic. Softneck is easier to grow, has plenty of cloves and stores well. Hardneck produces fewer but larger cloves and because they have a thinner skin have a shorter shelf life. It also produces flower stalks as part of its natural growth.

Carcassone Wight GAR 015 (HARDNECK) Exceptional, pink cloved hardneck showing great vigour in UK climate. Good

skin cover, great strength and carry through coupled with superior (in our opinion) bouquet and character. 12-14 cloves per bulb. 11 bulbs per kilo

1kg 2kg 3kg 5kg 10ka £29.50 £51.62 £78.17 £118.00 £221.25

Caulk Wight GAR 022 (HARDNECK) Selected from the best purple stripe garlic found in Russia and Eastern Europe. Large cloved, easy peeling and vigorous. They grow

particularly well in our relatively soft UK climate, north or south but can withstand -20°C. Once dried the outer leaves fall away to reveal the most beautiful marbled purple stripe bulb. Ideal for planting November to January. Harvest in June. 6-8 cloves per bulb. 19 bulbs per kilo.

1kq 2kq 3kq 5kq 10kg £29.50 £51.62 £78.17 £118.00 £221.25

Elephant Garlic GAR 08 A fleshy, juicy, mild, sweet flavour. Ideal for baking and roasting. Very large; each bulb is approximately 5-6 inches across. Not a true member of the garlic family. Closely related to leek, to which it bears a close

resemblance in flavour. Approximately 26-30 cloves

#### Rose Wight (HARDNECK)

GAR 024 With a rosy pink and white outer skin and deep pinkish cloves, this garlic has a strong flavour. Originally from northern Spain, it does

Mersley Wight GAR 023 (SOFTNECK) A classic "Silverskin" type, ideal for late winter or spring planting. One of the best for keeping qualities can store

up to June the following year. Mersley Wight has outstanding vigour and is larger and bolder than similar types, ideal garlic for the UK gardener. Ready for harvest end of July. 14-18 cloves per bulb. 11 bulbs per kilo.

Plant diseases can be transmitted by wind, insects, animals or human agencies and may be seed or soil borne. We believe goods sold to be free from latent defect but We do not guarantee this and We will not be responsible in any way for the resultant crop. Seed is supplied at horticultural standards, We do not warrant that seeds are free from human pathogens, and growers using it in high risk food production operations such as sprouted seeds or microgreens are advised to take suitable precautions.

- 16.3 If at any time We have a claim against You and We do not pursue that claim quickly, it does not mean that We cannot pursue that claim when We are ready.
- 16.4 If a court decides that a part of these Conditions is not enforceable in law that does not mean that the rest of it is not enforceable.
- 16.5 Any notice or written communication required or permitted to be served on or given to either party under the Contract shall be delivered by hand or sent by recorded delivery mail to the other party at its address set out above or to such other address which it has been previously notified to the sending party and it shall be considered to have been given on the day of delivery.
